# **Project Report 18**

# **Text Detection**

Name: DHIVAKAR.R

COURSE: AI and ML(Aug 2020)

Question: Implement a text detection and extraction model using OpenCV and OCR. The necessary steps that you need to perform are:

- 1. Image preprocessing
- 2. Find possible contours that can represent the textual areas.
- 3. Apply optical character recognition (using python-tesseract, google OCR engine.

### **Prerequisites**

What things you need to install the software and how to install them:

Python 3.6 This setup requires that your machine has latest version of python. The following url <a href="https://www.python.org/downloads/">https://www.python.org/downloads/</a> can be referred to download python. Once you have python downloaded and installed, you will need to setup PATH variables (if you want to run python program directly, detail instructions are below in how to run software section). To do that check this: <a href="https://www.pythoncentral.io/add-python-to-path-python-is-not-recognized-as-an-internal-or-externalcommand/">https://www.pythoncentral.io/add-python-to-path-python-is-not-recognized-as-an-internal-or-externalcommand/</a>. Setting up PATH variable is optional as you can also run program without it and more instruction are given below on this topic.

Second and easier option is to download anaconda and use its anaconda prompt to run the commands. To install anaconda check this url <a href="https://www.anaconda.com/download/">https://www.anaconda.com/download/</a> You will also need to download and install below 3 packages after you install either python or anaconda from the steps above Sklearn (scikit-learn) numpy scipy if you have chosen to install python 3.6 then run below commands in command prompt/terminal to install these packages pip install -U scikit-learn pip install numpy pip install scipy if you have chosen to install anaconda then run below commands in anaconda prompt to install these packages conda install -c scikit-learn conda install -c anaconda numpy conda install -c anaconda scipy .

Importing the required libraires

```
[11]: import pytesseract
pytesseract.pytesseract.tesseract_cmd = r'C:\Program Files\Tesseract-OCR\tesseract.exe'
import cv2
import matplotlib.pyplot as plt
```

#### Reading the image

```
[12]:
                                                      img = cv2.imread('promo.png')
                                                      plt.imshow(img)
[12]: <matplotlib.image.AxesImage at 0x20d639a8748>
                                                                                       Adube, the Adube logs, Acrolot, the Acrolot logs, Acrolot Capture, Adube Garamond, Adobe Intelligent Document Platform, Adobe PDF, Adobe Reader, Adobe Solutions Network, Aldus, Distiller, elsper, Extreme, IraneAdaker, Illustrator, Inflorger, Minson, Myrad, Pagoháder, Phonoshop, Portice, Protistorpt, and MMP are either registered trademarks or trademarks of Adobe Systems Incorporated in the United States and/or other countries. Microsoft and Wurdows are:
                                                              50
                                                                                    Systems Incorporated in the United States and/or other countries. Microsoft and Windows are either registered trademarks or trademarks of Microsoft Corporation in the United States and/or other countries. Apple, Man, Maximoth, and Power Maximoth are trademarks of Apple Comparison, inc., registered in the United States and other countries.                                                        200
                                                       250
                                                                                  0
                                                                                                                                       100
                                                                                                                                                                                                        200
                                                                                                                                                                                                                                                                      300
                                                                                                                                                                                                                                                                                                                                    400
                                                                                                                                                                                                                                                                                                                                                                                                    500
```

## Getting the text from the image

```
[13]:
      text = pytesseract.image_to_string(img)
      print(text)
